Here are the files you can download for free. Currently there are three different types of files. First format is the SolidWorks E-drawings. This file format will allow anybody to open the files no matter what software you have installed. E-drawings is the most user friendly format since you don't have to have any special 3-D modeling (CAD) software to look at the files. The second format is the solid model file in *.igs format. You must have some sort of 3-D modeling (CAD) software to open this file format. If you are planning on doing the machining I have, you will need the *.igs file. But if you just want to open the file to look at it, you can download the E-drawing. And the last type of files you can download are the blueprints. I don't make blueprints of the solid models I make. So if you need a dimension while working on your project, you will have to reference the model. Later on, I hope to make available other files dealing with my projects...including sketches, setup sheets, programs, etc. Tim at dumpsterCNC made the 1911 solidmodel *.iges file. Andy at Helix60@neo.rr.com made the VZ58 *.iges file.

My files are free to download, and if you share these files they must remain free!

Download instructions

SolidWorks E-drawings: Select the file you wish to download, click Save. To open the file, simply double click the *.exe file.

Solid Model *.igs File: Select the file you wish to download, click Save. Use your 3-D modeling (CAD) software to open to file after you unzip it.

Blueprints: Select the file you wish to download, click Save. Use Adobe to open the file after you unzip it.

AR-10 Assembly

GrabCAD

The screenshot shows the GrabCAD website interface. At the top, the browser address bar displays "grabcad.com". Below the navigation bar, a banner reads "Join 4,990,000 engineers with over 2,970,000 free CAD files" and includes a "Join the Community" button. The main content area features a large 3D model of an AR-10 Battle Rifle (7.62x51mm) in a dark grey finish, set against a light blue background. Below the model, a series of small thumbnail images show different views of the rifle, each with a red "3D" label. At the bottom of the page, the title "AR-10 Battle Rifle (7.62x51mm)" is displayed. To the left of the title is a user profile for "Oliver" with a heart icon and the date "November 8th, 2016". To the right of the title are three buttons: "Download files" (red), "Like" (white with a thumbs up icon), and "Share" (white with a share icon).

The screenshot shows the CNCGuns website interface. On the left is a sidebar with a list of items to download: STI FRAME, SIG P228 FRAME, BERETTA 92FS/M9, RUGER 10/22, AR-45 LOWER, and 22 SILENCER. The main content area contains a welcome message, download instructions for SolidWorks E-drawings, Solid Model *.igs files, and Blueprints. A dropdown menu for 'SolidWorks E-drawings' is open, showing a list of files including AR15 Lower Receiver, AR15 A2 Upper Receiver, AR15 A3 Upper Receiver, AR15 A1 De_handle, AR15 A2 De_handle, AR10™ Lower Receiver, AK47 Blank, 1911-A1 Frame, STI Frame, SIG P228 Frame, and Beretta 92FS/M9 Frame. Below the dropdown, there is a section for 'Complete Firearm E-drawings' and a PayPal donation link.

FOSSCAD MEGA PACK v4.8 (Ishikawa) Album

by **maduece** Apr 14 2016

[Next Post >](#)

FOSSCAD: Gluty AR-15 9mm Pistol

Here we have the Gluty AR-15 9mm Pistol and it works. This firearm is the colloration of 3 designers over the course of a few months. It accepts a Glock generation 3 or 4 magazine. This design is an improvement on the FOSSCAD Shuty AR-15 9mm Pistol version 4.0 MP-1. The Gluty uses all the same parts as the Shuty v4.0 MP-1 except for the lower receiver and magazine release.

FOSSCAD MEGA PACK v4.8 (Ishikawa) Album

by **maduece** Apr 14 2016

[Next Post >](#)

FOSSCAD: Caleb AR-10 Lower Receiver

This is an AR-10 receiver. It will not work with AR-15 uppers. It is DPMS pattern. Bolt hold open has been deleted on this lower receiver, so any AR-15 lower parts kit can be used to build it out. Ensure any parts kit installed has been rated for AR-10 use.

FOSSCAD MEGA PACK v4.8 (Ishikawa) Album

JamesRPatrick.com

FOSSCAD: PM422 Songbird .22LR Pistol

This is a single-shot, single-action 3d-printed pistol chambered in .22LR. It operates under a principle wherein the frame holds the barrel in compression axially and prevents the barrel layers from separating. This allows the barrel to be smaller in diameter than previous, unsupported designs. 100% printed barrels are not intended to have a long service life.

JamesRPatrick.com

FOSSCAD MEGA PACK v4.8 (Ishikawa) Album

by **maduece** Apr 14 2016[Next Post >](#)

firing pin, and elastic bands are used as springs. Steel barrel or chamber liners are not required but will significantly extend the life of the cylinder. The cylinder version that accepts chamber inserts has a capacity of 8 rounds. When the trigger is at rest in the forward position, the cylinder is rotated such that the firing pin is not in line with any cartridge, making this firearm drop-safe. 100% printed barrels are not intended to have a long service life. Works best with subsonic ammunition.

Special thanks to FP of FOSSCAD for printing and test firing this design.

Computer-aided Design

FOSSCAD does not host any CAD files but the Community does. There are two options for downloading the MegaPack, a torrent and a link for direct download. There is also a photo album with pictures of the new and upgraded items introduced in the latest official release.
